ENTERPRISE ENDPOINT VISIBILITY (EEV)

Enterprise Endpoint Visibility (EEV) is essential to eliminate blind spots, expose risks, and protect your network. TYCHON addresses the challenge facing most enterprises to get this visibility in real-time, while balancing reliable, relevant data with a scalable architecture. The TYCHON solution meets this need with the ability to see, manage, and secure every endpoint across the enterprise achieving complete visibility in a multitude of operating environments, with near real-time access to endpoint data and granular control of what information is important to you. With a comprehensive list of top questions to ask your enterprise, the ability to quickly see potential areas of risk and take action is easier than ever. Paired with TYCHON's other features, the TYCHON platform provides robust endpoint situational awareness with rapid response.

TYCHON is a software security company that develops advanced enterprise endpoint management technology that enables commercial and government organizations to bridge the gap between security and IT operations. The TYCHON product suite is engineered in partnership with the McAfee® Security Innovation Alliance and is exclusively developed using the SDKs for McAfee® ePO and Data Exchange Layer (DXL).

CAPABILITIES

Near Real-Time Monitoring

Catalog and check against signatures or inquiries using a local endpoint journal.

Historical Tracking

Build timelines of events by questioning journal information.

Ask the Enterprise

Execute frequently asked questions to quickly obtain a range of information.

Find the Anomaly

Investigate suspicious results through robust scripts, fuzzy hashes & more.

Remediation

Remediate findings after asking the question. Found an unwanted process? Kill the process from within the question results.

Automate the Work

Schedule key questions to reoccur so that analysts and operators can be freed up to perform HUNT operations and defend the network.

TAKE ACTION WITH TYCHON

- Query endpoints using natural language to access asset inventory, utilization data, and more.
- Scan and report on asset data with little to no network impact.
- Create custom query and remediation scripts.
- Access near real-time data on patches, versions, logon statistics, and other compliance metrics.

KEY FEATURES

REAL-TIME INCIDENT RESPONSE

Instantly respond to a new threat or IOC, from any vendor, by executing a cleanup, AV update, and services status check across all connected endpoints in a matter of seconds. Accepts both plain English text and full regular expression (REGEX) queries.

- ▶ Efficient IOC Searches
- ▶ One-Click Response Actions
- ▶ Two Person Integrity
- ▶ Target Endpoint by System Tree

CYBER SCORECARD DASHBOARDS

Interactive dashboards, which display real-time enterprise compliance metrics for up-to-date situational awareness of network risk. Vital reports with scoring on Web Servers, User Logon, HBSS Services, STIGs, Windows and Linux Patches, and Overall Organization Software Compliance.

- ▶ Strong Authentication
- ▶ Device Hardening
- ▶ Reducing Attack Surface
- ▶ Improved Detection and Response to Attacks

END USER ENGAGEMENT - TYCHON COMMUNICATOR

Close the gap between detection and response with a direct line of communication from the incident responder to the desktop of end users using the TYCHON Communicator platform. Send custom messages to one, some or all users (e.g. inform users that their machines are temporarily quarantined.)

- ▶ Displays Persistent Banner
- ▶ Send Custom Messages to any Endpoint

TYCHON ENDPOINT JOURNAL

Fully indexed record from every endpoint. Continuously monitor and record endpoint and server activity for near-instant identification of threats – present or past – and the complete view of an incident, root cause analysis, and tracing of network propagation.

- ▶ FIPS 140-2 Compliance
- ▶ Historical Data
- ▶ Compressed Messaging to Reduce Bandwidth
- ▶ Fuzzy Hash Journaling for Polymorphic Detection

PARTNER INTEGRATION

TYCHON's robust set of APIs makes integration with other endpoint or network capabilities straightforward and rapid via custom content creation, expanding data recording fields, and more.

- ▶ External Server Feeds
- ▶ DXL and Open DXL
- ▶ SIEM/ESM Feeds
- ▶ API/SDK

ARCHITECTURAL FEATURES

The TYCHON architecture was built using a Client-Server Model with a FIPS 140-2 compliant journal for endpoint data capture. Our custom designed compression algorithm allows data to be sent securely and quickly in any type of network condition, even with low bandwidth restrictions.

- ▶ Client-Server Model
- ▶ CSC and Data Roll-up
- ▶ No Scans required
- ▶ Targeting System Efficiencies

MCAFFEE INTEGRATION

TYCHON is engineered in partnership with the McAfee Security Innovation Alliance and is exclusively developed using the SDKs for McAfee ePO and DXL. TYCHON is thoroughly tested, authorized and digitally signed by McAfee as 'McAfee Compatible'.

- ▶ ePO: Single Pane of Glass, Centralized Control, Data Roll-up Support, Policy Enforcement, Access Control
- ▶ DXL: Sharing Information with other Vendors
